2016 Timely Progress Toward Degree Summer Initiative Description

- A centralized approach to summer course schedule construction focused on shifting courses from main campus (face-to-face) to distance (online), reducing the number of low enrollment courses, and offering courses students need to make timely progress toward graduation.
- Resulted in a 17% student credit hour increase.
- The student credit hour increase generated $2,151,226 in new revenue once the costs associated with the new model were deducted.
- Over time, as these students graduate, we expect to see a reduction in the time to degree metrics.
